

Devan Raut

platform engineer

hi@example.com · Bengaluru, India · github.com/devanraut

ten years building and running infrastructure: kubernetes platforms, delivery pipelines, and the open-source tooling in between. i write more than i design, and i consider a quiet pager the primary deliverable.

EXPERIENCE

senior platform engineer

2022 – Present

datum works · remote / bengaluru

own the kubernetes platform for ~60 services: node lifecycle automation (fleetd), the paved-road delivery pipeline, and the on-call rotation's declining page count.

site reliability engineer

2019 – 2022

arcline · bengaluru

moved a monolith's worth of traffic onto kubernetes without customers noticing. wrote the incident process that outlived my tenure, which is the point of an incident process.

backend engineer

2016 – 2019

sequent labs · pune

built billing and queueing systems in go. learned that the database is always the interesting part and the queue is always the postmortem.

EDUCATION

b.e., computer science

2012 – 2016

bms college of engineering · bengaluru

final-year project: a toy distributed file system that taught me everything by failing at all of it.
